Title: Media Player

Description: Our goal is to build a Media Player that is easily extended to meet users' unique needs.

Platform/Environment: Java application for Linux, Windows, and OS X using Swing and Java Media Framework

Programming Languages:

Language	Dea Allen	Sesha Chetlur	Pravin
Java	Beginner		

Functionality:

- User can play, pause, forward, and rewind media files
- Users can minimize, maximize, and close the player
- Users can adjust volume in the player
- Users can choose from multiple skin options
- Users can bookmark times in particular media files
- Users can crop and zoom media files

[OPTIONAL] Stretch Functionality:

- Users can convert between file formats
- Users can enable, disable, or find subtitles
- Users can apply custom filters to still images
